## Percentage answered per survey question

### Question 1

A siren alarm is given on Campus and Gate 2 is closed. You are on your way towards the Campus. **What do you do?**

#### The correct answer

You follow the yellow diversions signs and you wait outside the Chemelot Site until the end of the siren alarm is given.

#### Results Question 1

#### Comment SHE

Do not put yourself at unnecessary risk by stopping next to the road, with closed windows and the ventilation of your car shut down. You are blocking the road for the professional help to assist during the siren alarm. For your own safety, drive away from the Campus via the diversion signs and wait outside the Chemelot site until the end of the siren alarm is given.

### Question 3

You are on your way home. At the parking location (G122-180 / P5 / P2) you hear the siren alarm. **What do you do?**

#### The correct answer

You get into your car, close all the windows and shut down the ventilation. You drive away from the Campus.

#### Results Question 3

#### 59,7% thought the answer was:

You leave the parking location to go to the nearest reasonably airtight room (RDR) inside a building.

59,7%

#### Comment SHE

Your own safety always comes first! In case of a siren alarm you need to go as fast as possible to a RDR. Your car with closed windows and the ventilation shut down is also a RDR! The nearest RDR in this situation is your car.

### Question 5

You are in present in the Center Court building and you see a person performing a dangerous handling. **What do you do?**

#### The correct answer

You step towards the person and you address his/ her behavior.

#### Results Question 5

#### Comment SHE

SHE-values: Give feedback on unsafe behavior, with respect for the other.

### Question 2

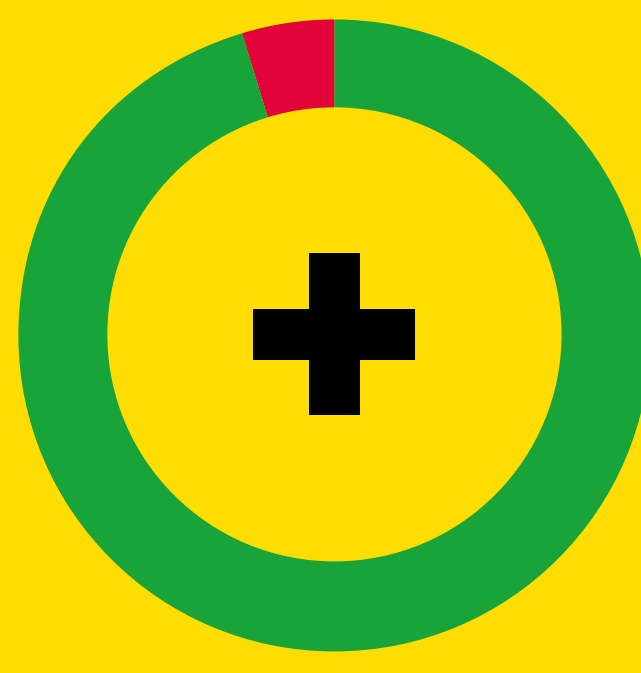

You are walking on Campus grounds and you see a person collapsing. **What do you do?**

#### The correct answer

You call the alarm number +31 46 47 66666 and you stay with the person until the professional assistance has arrived.

#### Results Question 2

#### Comment SHE

Do not call 112 when you are on Campus. The professional help, after calling 112, does not know the campus grounds and will arrive much later on location. The professional help from Chemelot that will arrive after calling the alarm number +31 46 47 66666, are on location within 6 minutes. This is much faster.

### Question 4

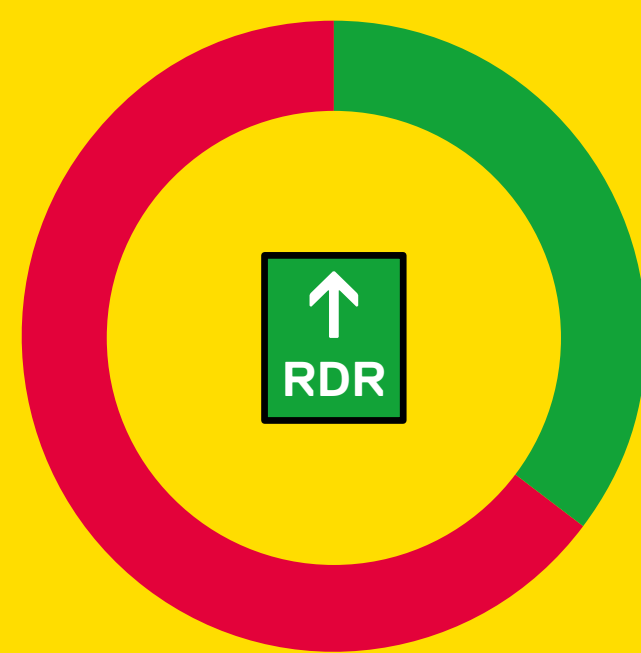

You walk on Campus grounds and you smell a strong ammonia odor. **What do you do first?**

#### The correct answer

You walk towards the nearest building with a reasonably airtight room (RDR) and you shut down the ventilation inside the RDR.

#### Results Question 4

#### 63,4% thought the answer was:

You call the alarm number +31 46 47 66666 and you report the ammonia cloud.

63,4%

#### Comment SHE

Your own safety always comes first! First go, as fast as possible, to the nearest building with a RDR and the ventilation in this building shut down. Once this is done you call the alarm number +31 46 47 66666 to report the ammonia cloud.

### Question 6

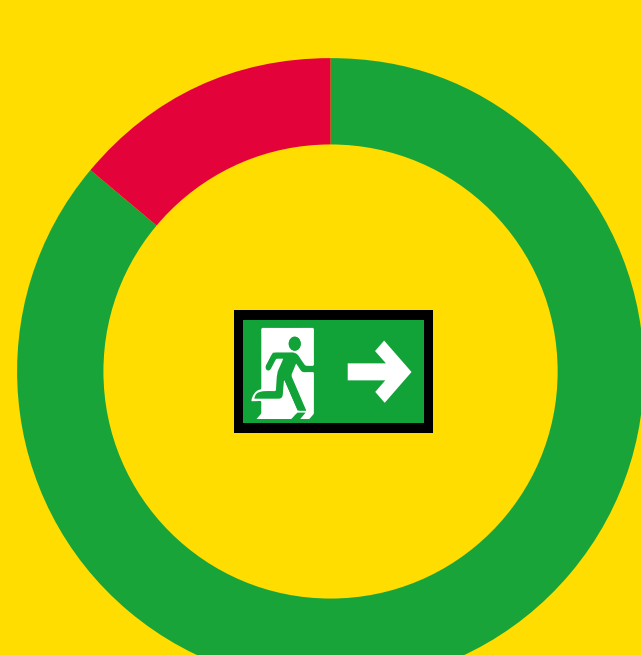

The building where you work is being evacuated. **What do you do?**

#### The correct answer

You leave the building via the fastest and safest evacuation route and you go to the assembly point you hear over the Public Announcement (PA) system.

#### Results Question 6

#### Comment SHE

Do not put yourself at unnecessary risk by collecting your personal things. In case of an evacuation of the building, leave the building via the fastest and safest evacuation route and go to the assembly point that is broadcasted via the public announcement system
