1 Siren area

The Chemelot site has different siren areas. The Campus is located in siren area 22.
Only building 124-037 is located in siren area 08.

When the siren alarm sounds, this means there is a major and immediate (threat of) danger. The start of the siren alarm is a rising wailing tone of 3 seconds, followed by a descending wailing tone of 5 seconds. This continues for 70 seconds. An announcement via the public announcement (PA) system will state which area the alarm concerns and what should be done. When the danger has passed, the safety signal will sound. This is a constant tone lasting for 70 seconds.

The announcements can be heard again when you call the following telephone number +31 46 47 68709.

1.2 A siren alarm sounds on Campus: What now?

- Stop your work in a safe manner.
- Are you outside? Immediately enter a building.
- Follow the signposting to a reasonably airtight room (RDR; toxic shelter).
- Go inside the reasonably airtight room and shut all windows and doors.

- Switch off the ventilation with the stop button (if present).
- Follow the instructions from the Public Announcement (PA) system and follow the agreements for reporting and assembly location which apply to your company or department.

- Remain in the RDR or reasonably airtight room until you hear the 'all clear' signal or a spoken announcement of that nature via the PA system.

- Limit your telephone usage.

The local supervisor acts as an assembly leader and will determine if persons are missing. A person is considered missing if there are reasons to believe that he/she is currently in the danger zone. Suspected missing persons are reported to the Duty Officer on +31 46 47 64444 or +31 62 29 04304. If it becomes clear that persons who were reported as missing are safe, then the assembly leader will cancel the missing person's report.

1.2.1 Outside regular working hours?

- Go to a building with the title 'RDR inside 24/7'. You can enter the 24/7 RDR by pushing the emergency button outside the door/ sliding doors.

- Go inside the reasonably airtight room and shut all windows and doors.
- Switch off the ventilation with the stop button (if present).

- Follow the instructions from the PA and follow the agreements for reporting and assembly location which apply to your company or department.

- Remain in the RDR or reasonably airtight room until you hear the 'all clear' signal or a spoken announcement of that nature via the Public Announcement (PA) system.

- Limit your telephone usage.

1.2.2 Are you at a parking location on Campus?

- It is advised to step into your car, with closed windows and the ventilation shut down.
- Drive away from the Campus. During a siren alarm you can exit the Campus via the crossing gates.

1.2.3 Are you on your way to Campus?

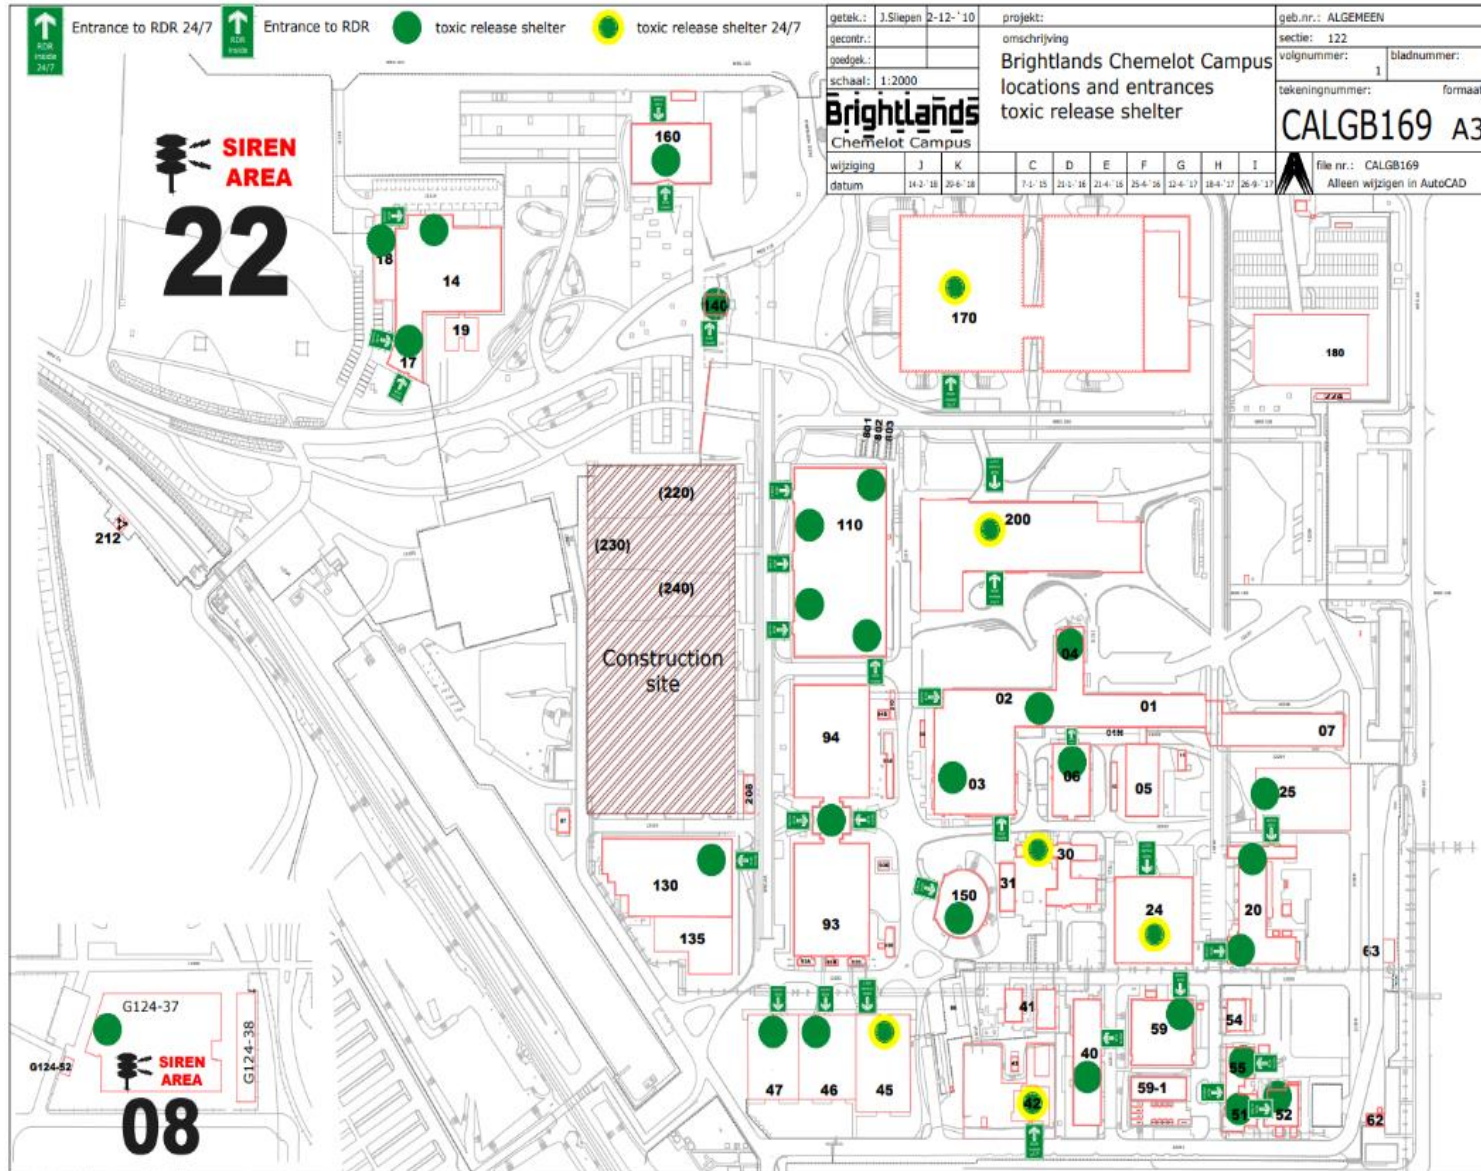

- Drive away from the Campus.
- Follow the yellow alarm diversion signs.

1.3 Floor map with RDRs on Campus

Be aware of the exact locations of the RDRs/ toxic shelters on Campus. Always check the signs at the entrance of each building for the exact location of the RDRs/ toxic shelters.
